

INTEGRATED COMPANY POLICY FOR QUALITY AND SUSTAINABILITY

Since its origins - in 1972 - ITP has distinguished itself nationally and internationally in the flexible plastic packaging sector thanks to the quality of its products. The company considers third-party verification a guarantee of the reliability of its work and an incentive for continuous growth. For this reason ITP was among the first players of its sector to obtain certification for Quality, Health and Safety Management Systems.

The constant commitment to continuous improvement and attention to its customer needs have materialized in the voluntary adoption of the HACCP system as a preventive approach in order to guarantee the safety and wholesomeness of products intended for the food sector.

Thanks to the constant activity of adapting to regulations, ITP has achieved important goals over the decades not only for the quality of the products, but also for the commitment to environmental protection and the sustainability of its work towards the entire value chain. The objectives and results obtained are illustrated in the Sustainability Report.

The Management constantly renews its commitment by guiding the Organization through solid and shared values of COMMITMENT, INTEGRITY and RESOURCEFULNESS, towards a business management that ensures the necessary resources and support for the achievement of the objectives summarized by the corporate Vision: **implement technologies innovative processes and materials to reduce environmental impact and increase people's well-being.**

FOOD CONTACT SAFETY
We explore innovative ideas and technologies to obtain safe and reliable products in compliance with regulations

ENVIRONMENTAL PROTECTION
We expand the role of flexible plastic films by proposing and developing new solutions with a lower environmental impact

SECURITY AND GROWTH
